

A905 Creating Light AB Services August 2006

Needs analysis

The Needs analysis gives you a foundation for projection, where all escape routes, escape signs and requirements are properly documented.

Projection and official contacts

With the needs analysis and official contacts as a foundation our technical specialists help out with A905 specially design suggestions programs that gives a variety of solutions required for the specific project.

Drawings

Creating Light gives a clear description of the different solutions that could be suitable for the project from the basis of the needs analysis and projection. All security equipment are drawn in escape routes, signs, prohibition signs, combined signs, fire extinguishers (water), first aid, construction sites men's room and smoke routes.

Transport and assembly

Cost effective transport solutions and correct assembly minimizes the disturbance with the ordinary day to day business. Escape routes, signs, hand and fire equipment, first aid, construction sites men's room and other necessary elements are delivered functioning and at the right time.

Supervising during construction and random facilities

Supervising of delivered facility or equipment is included in our quality control and shows that function and environmental demands are met – in addition we can weekly control the facility if necessary.

Driftsättning

Assembly and controlled facility or equipment are made functioning by our staff that also controls right functioning (see even last paragraph)

Operation and maintenance

Creating Light routine checks creates security and supposition that the facility functions at all times that it is used for its purpose.

Education and handhavande

Creating Light education creates safety and secures the installed facility.

Disassembly

Creating Light personnel sees to a proper disassembly of the facility without any major disturbance for the business present. Clear instructions, routines and demands minimize the time needed to do so.
